

Product Catalog: Tasklet Mobile WMS for SCM/FO/AX

Take Your Warehouse to the Next Level

 tasklet

From Advanced to Simple and User-Friendly Warehouse Management

A warehouse management system is indispensable for achieving an efficient, seamless, and error-free warehouse operation.

While the Dynamics 365 supply chain management package's advanced warehousing module – WHS/WAX – can be a suitable choice for detailed planning, it often comes with high implementation costs, cumbersome processes, and demands for in-house expertise.

The last thing your WMS should do is complicate your workflow further.

At Tasklet, we aim to simplify intricate warehouse processes by providing an user-friendly and efficient alternative to WHS/WAX.

Continue reading to explore all of Tasklet's features designed to enhance your workflows and establish more efficient, error-free warehouse processes.

Easy App Configuration!

Discover the magic of effortless app customization with Easy App Configuration. Tailor the app to your liking, tweak settings, and design your way. With instant visual feedback, your mobile experience just got smoother.

- 10 Unplanned Cart Move
- 13 Pick
- 14 Pack & Ship
- 14 Automated Warehouse
- 16 Warehouse Management Made Easy

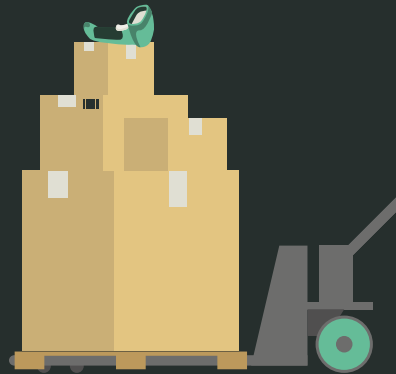

Inbound

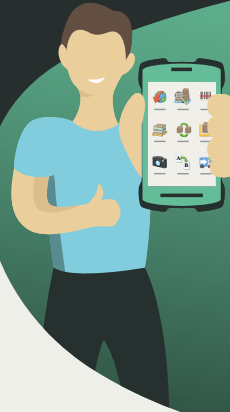

INBOUND:

Control and Validate Your Data for an Error-Free Receiving Process

Challenge:

Slow and inefficient receiving processes. Incorrect item registration. Put-away errors and misplaced items. These lead to problems when picking products for sales orders and other outbound processes.

Tasklet Mobile WMS:

Quick data registration, order receipt control, guidance for correct put-away, and the elimination of problems with adding barcodes give you a smooth and fast receiving process.

Receive

Receiving items into your warehouse can become an organizational nightmare without the right tools.

Why? Because manual data entry into your ERP system or navigating a complex digital system consumes valuable time.

Tasklet Mobile WMS offers a mobile solution that eliminates the need for manual data entry into your ERP system.

Simply scan your received goods, and our Receive feature ensures that the data is immediately available within your ERP system.

Need to expedite the receipt of a large quantity of goods? No problem.

The Licence Plate feature provides exceptional flexibility by allowing you to efficiently receive substantial quantities of items on a single pallet with a simple ID scan.

Impressive, isn't it? Ultimately, you can streamline your goods in process, eliminating unnecessary steps, and complete the task much more efficiently.

Register Barcode

Encountering new barcodes or needing to make changes is a common occurrence in warehouse management.

Traditionally, this disrupts your receiving process, forcing you to trek back to a computer to register the barcode.

But with our Register Barcode feature, Tasklet Mobile WMS streamlines the process.

You can effortlessly register any new barcode directly from your handheld device, allowing you to resume your work promptly.

Print Label

You're well aware of how crucial barcodes are in warehouse management.

They house all the information you require, making the absence or damage of a barcode a significant issue.

Enter the Print Label feature, which empowers you to create and print new barcodes directly from your mobile device.

These labels encompass standard information from your product data in the Microsoft Dynamics ERP system, along with fresh data entered directly on the device, including:

- Batch/serial number
- Expiration date
- Quantity

Other labels include product receipts, location labels and many more.

Data values can be displayed in a GS1 DataMatrix (2D/QR codes), or a simple linear barcode can always be used, ensuring flexibility.

If you need to print labels other than standard labels new labels can easily be configured without need of any coding.

With this feature, printing a label is a swift process, minimizing the risk of inaccurate registrations.

Attach Image

Have you ever received a shipment in less-than-ideal condition?

Simply snap a photo on your mobile device of the damaged item or the entire shipment you've received.

Thanks to our Attach Image feature, you can easily attach photos to any line. Once attached, these images are instantly accessible within your ERP system. This streamlines workflows and facilitates seamless information sharing between the front lines and the backend of your warehouse.

Likewise, you can transmit information from your ERP system to the scanner.

In short, Tasklet Mobile WMS simplifies the flow of information, making your processes significantly smoother!

Quarantine Order

Do you have specific items that require consistent quality control checks?

Have you encountered shipments where uncertainty about the quality prompted you to assess whether to keep or discard items?

Dealing with such situations can create significant bottlenecks in your receiving process.

Enter the Quarantine Order feature, designed to address these challenges. It notifies you of shipments that require quarantine and inspection before registration.

Additionally, you have the flexibility to set up

your quarantine orders when you detect any irregularities.

The beauty of managing this directly from your device?

You can expedite the process of setting aside items or shipments, significantly reducing the risk of inventory blockages upon arrival in your warehouse.

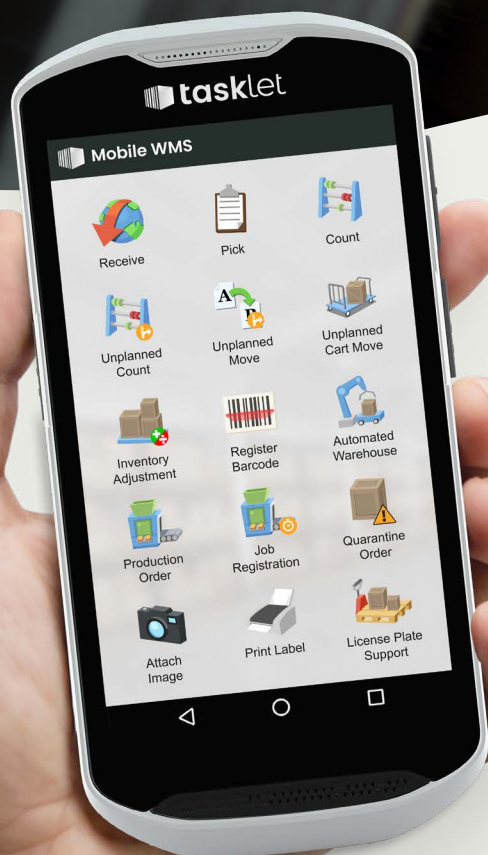

Another advantage? It guarantees that no one mistakenly picks items from a quarantined order, maintaining the integrity of your quality control process.

An Intuitive Interface for All Users

Tasklet Mobile WMS is meticulously designed with a strong emphasis on user-friendliness, enabling warehouse workers to complete tasks with minimal steps. Onboarding new users typically requires just a brief 15-minute introduction.

Each feature in the system is complemented by images and icons, simplifying navigation. All actions are guided and controlled using data from your ERP system.

Furthermore, Tasklet Mobile WMS is available in over 15 languages. **Discover your preferred language on our website.**

Join Over 1,000 Companies Already Harnessing the Power of Digitalized Workflows

With a decade of experience in optimizing warehouses, Tasklet Factory has gained invaluable insights and expertise in warehousing processes. Leveraging this knowledge, we have crafted Tasklet Mobile WMS, a solution tailored to tackle the daily challenges faced by warehouses of all sizes and industries.

INTERNAL

Count, Move, and Locate Items Hassle-Free From a Mobile Device

Challenge:

It is hard to keep up with the myriad of fast-moving items in your warehouse. Too much time is spent on counting. There is no overview of your goods, their location, or the quantity.

Tasklet Mobile WMS:

Real-time data collection will enable you to count, update, adjust, and move your stock on a mobile device, ensuring your internal warehouse processes run smoothly.

Move

A warehouse is a constant whirlwind of items, constantly moving in, around, and out. For you, this means maintaining a clear overview of your inventory can be quite a challenge.

With our Planned Move and Unplanned Move features, you can effortlessly track your items and reduce the risk of misplacing goods. Our mobile scanning solution enables you to relocate an item from one location to another directly from the warehouse floor.

This eliminates the need to manually record the move with pen and paper before entering

it into your ERP system – saving you time and minimizing the risk of errors.

Have you ever needed to move multiple items in a single operation without the hassle of extensive registration? Our Unplanned Cart Move feature grants you the freedom to do just that.

Using your mobile device, you can easily move as many items as needed into the cart and move everything at once – all while maintaining a clear overview of your stock.

Internal

Count

What if you could achieve a consistently error-free, quick, and efficient counting process every single time?

Our Count feature is designed to do just that, saving you valuable time while simplifying and accelerating the counting process while minimizing the potential for errors.

How does it work?

You simply scan or enter the item, its location, and the quantity directly into the mobile device.

This ensures you maintain a crystal-clear view of your warehouse inventory, preventing the accumulation of dead stock or running out of items to sell.

To ensure the accuracy of your counts, the counting journals must be validated by the warehouse manager before they are posted into Microsoft 365 SCM/FO/AX.

Return on Investment in 6-12 Months

Based on customer feedback, our clients typically achieve a return on investment (ROI) within 6-12 months, with the timeline influenced by the company's size.

This impressive achievement is made possible by digitalizing warehouse processes, resulting in streamlined and efficient workflows, a substantial decrease in errors, and substantial time savings.

Locate Item

You're likely familiar with the saying, "Looking for a needle in a haystack."

But that's not the analogy you want to hear when searching for an item in your warehouse.

To simplify the process of locating any item within your warehouse, we offer the Locate Item feature. With this tool, you can easily identify the storage location of any item by checking the

on-hand quantities in Microsoft Dynamics 365 SCM/FO/AX right from your mobile device.

How does it work?

Select the Locate Item icon from the main menu, then scan or type the item/barcode/GTIN-code. You'll receive a list of locations, allowing you to pinpoint exactly where to find the item.

License Plates Support

Tasklet Mobile WMS isn't limited to standard warehouse processes – it's designed to optimize your workflows and save you valuable time.

One of the ways we accomplish this is through our License Plate functionalities. And what exactly is license plates in this context?

It's a concept that allows you to associate a group of items with a unique ID.

By grouping multiple items onto a pallet or into a box, you can effortlessly move your inventory within your warehouse.

If you're using Microsoft Dynamics AX, this feature might be referred to as "pallets" instead of license plates. But whether it's called a license plate or a pallet, it simplifies your workflows.

Let's break it down:

- Receive products onto license plates.
- Move products from one license plate to another.
- Pick products from license plates.

In the end, our License Plate Support simplifies complex inventory management, making your warehouse operations more efficient.

Inventory Adjustment

Discovering a damaged item, accidentally dropping a product, or encountering an expired item in your warehouse – these situations call for inventory adjustments.

With our Inventory Adjustment and Negative Adjustment features, you gain the power to manage and fine-tune your warehouse

inventory in real-time, all directly from your mobile device.

Usually, this level of control is reserved for warehouse managers. That's why we've built in the flexibility to restrict access to all features, ensuring availability only to those who need it most.

Unplanned Cart Move

With the Unplanned Cart Move feature, you can take a cart with you into the warehouse, start moving multiple items onto the cart, and easily track them on your mobile device.

Once all items have been collected, you can choose to unload them individually or all at once to new locations. Moreover, the cart proves invaluable for picking items for production or transferring them to the packing station for shipping.

Discover How Easily You Can Boost Your Warehouse Processes

Tasklet Mobile WMS will help you reduce errors and increase the speed of your workflows. And what's even better? The stunning and intuitive user interface will get you up and running like a breeze from day one.

Book a demo to discover how easy the system is to use and why more than 1,000 companies using MS Dynamics 365 have chosen Tasklet Mobile WMS to optimize their warehouse.

Never Lose Data – Not Even When You're Offline!

Wireless networks are great, but wireless technology isn't always reliable and available, which can cause you problems.

For this reason, we've developed Tasklet Mobile WMS to work even without a network connection.

You can download orders to your mobile device, and it will register your actions even when you're out of Wi-Fi reach – and as soon as your device is reconnected, it will upload the data to the ERP system. Neat, right?

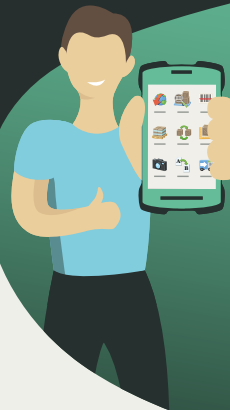

PRODUCTION

Effortless Shop Floor Control for Manufacturers

Challenge:

You might grapple with inventory discrepancies caused by manual data entry errors. This can lead to inaccurate production records, delays, and inefficiencies.

Tasklet Mobile WMS:

Offers automated production data capture on the shop floor, eliminating errors and ensuring accurate production records.

Production Order and Job Registration

If you're in the manufacturing business, our Production Order feature and Job Registration might be the perfect tools for you.

These functions provide you with lightweight shop floor control – right on the shop floor itself.

Using a mobile device, you can effortlessly record vital data, such as time, resource utilization, production performance, the quantity of correctly and incorrectly produced items, and

even employee absences, all in real-time on the shop floor.

This streamlined process eliminates the need to constantly shuttle between the shop floor and a computer for data entry, ultimately saving you valuable time and enhancing efficiency.

If you are a process manufacturer our Batch Orders with Co/By Products will be a good fit for you.

Outbound

OUTBOUND

Optimize Your Picking, Packing, and Shipping Efficiency

Challenge:

Pickers waste valuable time roaming around your warehouse searching for the right items to pick. Incorrect picks lead to wrong shipments. Wrong shipments lead to costly return orders and unhappy customers.

Tasklet Mobile WMS:

Provides the necessary guidance and control to keep track of your items, status, quantity, and bins to run efficient picking, packing, and shipping processes – benefitting you as well as your customers.

Pick

How fast are your pickers? Perhaps more importantly, could they be more efficient?

Yes; if you get the right picking processes.

Our Pick feature supports your pickers in their daily work by providing them with the necessary information to do it efficiently. They can access picking lists, batch numbers, location numbers, serial numbers, quantities – you name it.

With a quick scan of the items you pick, you validate that you are in fact shipping the correct

goods to your customers; drastically reducing picking errors and keeping customers happy.

What else? The Pick feature also provides your pickers with the smartest possible picking route generated by SCM/FO/AX, helping them get around your warehouse as effectively as possible.

Sure, this will save your pickers time. But it will also help you achieve correct orders and faster shipments, and in the end, happy customers.

Pack & Ship

Picking, packing, and shipping are deeply interconnected processes in any warehouse.

And if you fix your picking processes, you should also look at how you pack and ship items to get the most optimal and error-free outbound process.

When picking is done, you're ready to send the items to packing. Here the Packing and Shipping feature can help you make detailed packaging

and finalise the outbound license plate.

After the packing is done? Scan the outbound license to confirm shipment.

Digitising these processes helps you validate that the orders are correct and keeps an overview of all your outbound processes.

All in all, saving you a lot of time.

Automated Warehouse

Experience the future of warehousing with the Automated Warehouse feature, designed to supercharge your warehouse operations.

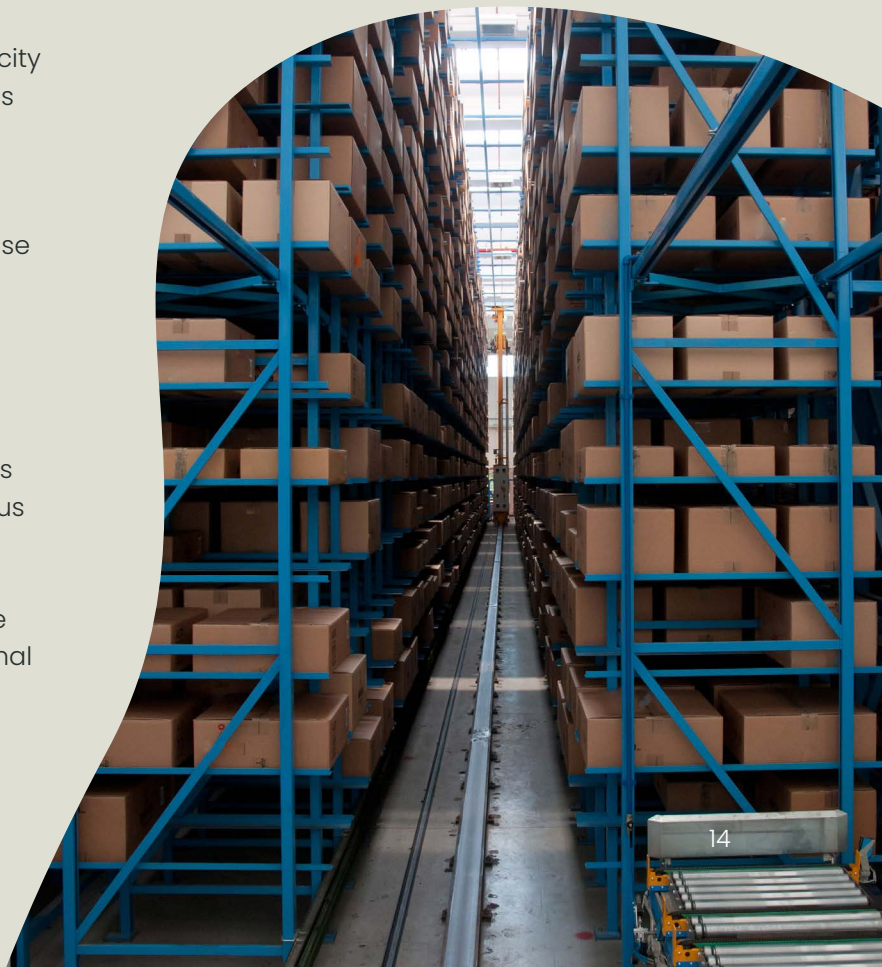

At its core, the Automatic Storage Rack and Smart Retrieval Mechanism optimizes space utilization, ensuring maximum storage capacity while maintaining accessibility. What sets this feature apart is its automation capability.

Warehouse staff find it effortless to communicate with the Automated Warehouse via handheld devices, enabling real-time command inputs and order tracking.

The benefits are easy to spot:

- **Enhanced Efficiency:** Automation reduces manual labor, allowing your team to focus on value-added tasks.
- **Cost Savings:** Minimized labor and space optimization lead to significant operational cost reductions.

- **Customer Satisfaction:** Accurate, timely order fulfillment and real-time inventory visibility ensure satisfied customers.

Features for Microsoft Dynamics 365 SCM/FO/AX

Receive

Register and control received items. Supports batch-/serial numbers and expiry dates.

Register Barcode

Associate or add a barcode to an existing item.

Print Label

Print labels from your mobile device

* printer license required

Print Log

Show your history of label prints and make reprints.

Quarantine Order

Handle quarantine orders.

Attach Image

Use the camera on your mobile device to attach pictures in the work process or create item images.

Unplanned Move

Perform unplanned movements of items.

Count

Perform planned counts and tag counts.

Unplanned Count

Perform unplanned counts.

Unplanned Tag Counting

Perform unplanned tag counting.

Locate Item

Look-up the location, the available quantity, and the product data of an item.

Location Content

Look-up the content of a warehouse location.

Negative Adjustment

Complete a negative adjustment.

License Plate Support

All features support the use of License Plates with complete overview of their content.

Inventory Adjustment

Create journal to increase or decrease quantity of inventory.

Unplanned Cart Move

Perform unplanned movements of multiple items.

Production Order

Report items as finished on a production order.

Job Registration

Report items as finished jobs.

Pick

Picking of single or consolidated orders.

Pack & Ship

Finish packing and shipping directly from the mobile device.

Automated Warehouse

Integrate with warehouse automation equipment such as storage racks and transportation robots.
