

Guide: From inefficient processes to effortless management with Mobile WMS

3 Actions to Minimize Errors Within Your Warehouse

Struggling to Keep Up With the Fast Pace of Your Warehouse?

From receiving items and putting them away in bins to picking them for shipment, you need to juggle multiple interconnected processes.

If asked, you could certainly share some horror stories about endless hours spent counting goods, struggling to find specific items, enduring time-consuming picks, and dealing with wrong shipments, right?

What's the common thread? Inefficient warehousing processes.

It doesn't matter whether you use manual workflows with pen and paper or outdated management systems. Without an effective system, you've got your work cut out for you.

With a mobile warehouse management system (WMS), you can save yourself the logistical headaches and instantly ease your warehousing workflows – and eliminate errors while you're at it.

In this guide, we'll delve into the power of utilizing a mobile WMS system, empowering you to optimize your warehouse with just three simple actions. It's time to say goodbye to errors in your **inbound**, **internal**, and **outbound** processes and say hello to:

- An optimal, fast, and accurate receiving process.
- Highly effective processes for counting, moving, and locating goods.
- Error-free picking and shipping.

Get ready to transform your warehouse operations and enjoy smoother, more efficient processes. Let's dive in!

What Is a Warehouse Management System?

A warehouse management system (WMS) is a software application that can help optimize and support warehouse processes and operations by digitalizing and streamlining your workflows.

How? By providing you with the necessary tools to plan, organize, oversee, and control your workflows for efficient warehouse processes.

Step Out of the Digital Dark Ages With a Mobile Solution

If you're looking into adopting a WMS solution, you'd be wise to consider choosing a **mobile solution**.

Here's why: a mobile WMS extends your ERP system to a handheld mobile scanner.

This allows your warehouse workers to carry a handheld device around the warehouse and do the data registrations you'd normally do on a desktop or laptop, on the move.

Leaving sheets of paper and scrawled handwriting behind in favor of barcodes, you're not only removing redundant processes. You are also adding up-to-date information, straightforward digital guidance, and crucial control to your warehousing processes to help you to eliminate errors, increase inventory accuracy, and avoid disruptions to your workflow.

Continue reading to find out how a mobile WMS solution will lead to improvements across all your warehouse processes.

ACTION #1

Master a Flawless Receiving Process: Boost Efficiency and Minimize Errors

The first step in your warehouse process is receiving items, and you know better than anyone how important it is to get this right.

Because this process will either provide you with a solid foundation for an efficient and effective warehouse operation or come back to bite you. You've undoubtedly entrusted your experienced staff with the receiving process to ensure the best outcome.

But even with the most dedicated and detail-oriented workers, you can't entirely avoid errors during the receiving process.

There is always the risk of:

- Receiving and registering the wrong products into your ERP system.
- Receiving items with missing or damaged barcodes.
- Incorrect registration of lot numbers, expiration dates, or serial numbers.

You could probably think of at least ten other pitfalls in the receiving process. The common factor among all these issues is that a manual

workflow increases the risk of errors and leads to wasted time, additional costs, and a great deal of frustration.

So, how can you receive items error-free without compromising speed and effectiveness?

A mobile WMS scanning solution will help you keep track of your inventory during the receiving process. It provides a digital overview of your received orders and validates the correctness of items by requiring a barcode scan. Simultaneously, it eliminates the need for manual item checks and separate data entry into your ERP system.

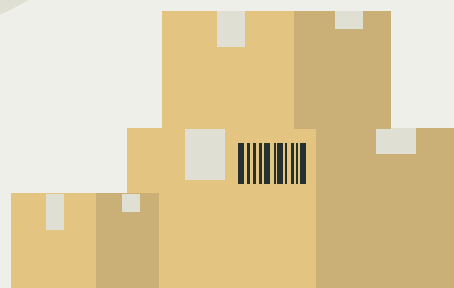

Revolutionary 94% Time Savings in Receiving Process

For Nicehair, investing in Mobile WMS from Tasklet resulted in a remarkable reduction of up to 94% in the time spent on receiving items. It may sound too good to be true, but rest assured, it's not.

[See how they did it!](#)

"Before Tasklet Mobile WMS, a large order could take one and a half days to receive. Now it takes two to four hours."

Niels Krogh, Operations and Logistics Manager, Nicehair

It Has Never Been Easier to Receive Your Goods

The Receive feature in Tasklet Mobile WMS makes it easy for you to receive directly from warehouse receipts, purchase orders, sales return orders and transfer orders.

The filtering option will make it quick for you to locate the order you need.

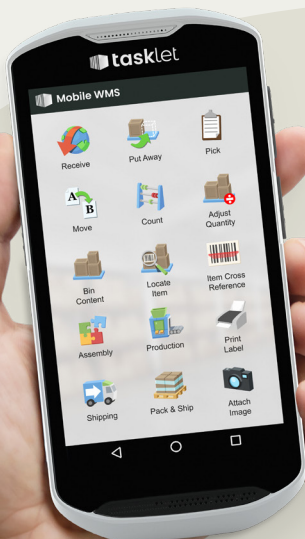

All you need to do is scan the barcode(s) of the item(s) and verify that you've received the items in the order and the correct quantity. Easy!

If you receive an item without a barcode? No problem. Just generate and print a new label or barcode.

The camera function lets you document the condition of your received items – a handy tool if your delivery has been damaged during transportation.

Join Over 1,000 Companies Already Harnessing the Power of Digitalized Workflows

With a decade of experience in optimizing warehouses, Tasklet Factory has gained invaluable insights and expertise in warehousing processes. Leveraging this knowledge, we have crafted Tasklet Mobile WMS, a solution tailored to tackle the daily challenges faced by warehouses of all sizes and industries.

ACTION #2

Keep Track of Your Warehouse Inventory to Save Time and Reduce Errors

Does this description match your internal warehouse operation: Constantly moving goods, a lack of oversight, and way too much time spent on counting or locating items?

Well, you're not alone. One of the biggest challenges in many warehouses is keeping track of the entire inventory.

Why? Manual or outdated processes leave you constantly playing catch-up, making it nearly impossible to maintain an overview of your inventory items, their locations, and their statuses without proper support.

But you can overcome these problems and save yourself logistical headaches with a mobile WMS.

Digitalize Your Warehouse Workflow and Access Real-Time Data

A mobile WMS scanning solution provides a complete, accurate, and up-to-date overview of your warehouse inventory.

Your warehouse workers can directly enter their actions into your ERP system using mobile devices, giving you the necessary real-time data to keep your warehouse operations running smoothly.

Another benefit? It frees up significant time for your warehouse workers.

No longer will they need to spend time writing, ticking, making notes on paper, or constantly moving between racks, pallets, boxes, and computers to manually register information into your ERP system.

Never Lose Data – Not Even When You're Offline!

Wireless networks are great, but wireless technology isn't always reliable and available, which can cause you problems.

For this reason, we've developed Tasklet Mobile WMS to work even without a network connection.

You can download orders to your mobile device, and it will register your actions even when you're out of Wi-Fi reach – and as soon as your device is reconnected, it will upload the data to the ERP system. Neat, right?

Eliminate Manual Processes (And Costly Errors)

How many times have you experienced errors in your warehouse due to inefficient manual processes?

Most likely, more than once.

The good news is that by utilising a mobile scanning solution, you can drastically reduce the number of errors in your warehouse processes.

A mobile WMS scanning solution will guide your workers as they access all relevant information about their tasks on the mobile device. They can view details such as the item's name, number, description, or even an image, along with the specific bin for moving, counting, or locating goods. With a simple barcode scan or two, controlling the action becomes effortless.

For you, this means fewer misplaced items during relocation, accurate and efficient counts, and no more wasted time searching for specific items. Now, wouldn't that be great?

A More Efficient Process with Tasklet Mobile WMS

Some significant features within our Mobile WMS solution can make a considerable difference for most warehouses and their internal logistics:

The **Count** feature will help you reduce the number of man-hours and achieve more accurate and efficient inventory counts.

The **Move** feature eliminates the need to manually keep track of items, which can lead to many errors and misplaced items.

The **Locate Item** feature enables you to find any item quickly, saving you time and making it faster to ship orders to your customers.

ACTION #3

Fix Your Picking Process to Secure Fast, Efficient, and Error-free Shipping

You know just how important the picking process is in a warehouse.

You also know how detrimental an inefficient or error-prone picking process can be. Not only can it be time-consuming to have your pickers running around trying to locate items for a pick, way too often it will also lead to delayed or wrong shipments.

The cause of these frustrating challenges? Inefficient workflows, chaotic storage, and misplaced items.

Incorrect placement of an item can make your warehouse worker pick out the wrong item. Additionally, an inefficient workflow or unorganized logistics can make it harder for employees to pick, pack, and ship an order fast enough.

Want to know how to fix these problems? Keep reading...

Pick, Pack, and Ship with Mobile WMS

A Mobile WMS solution guides you through every step of your outbound workflow, empowering you to maintain control over your picking and shipping processes.

By scanning items, your workers can ensure that they pick, pack, and ship the correct items in the right quantities, resulting in fewer picking errors.

What happens when there are fewer picking errors? You avoid the need for re-handling items, and you achieve a faster and more accurate packing and shipping process. The major bonus: Your customers receive the correct goods within the expected timeframe.

In summary, a mobile WMS can revolutionize your inbound, internal, and outbound warehouse processes by:

- Streamlining your receiving process through control and validation of item registration and correct placement, leading to...
- Eliminating chaotic storage and misplaced items by maintaining accurate inventory tracking, allowing you to...
- Attain the most efficient picking process with guidance and control over warehouse actions, ultimately resulting in fast, accurate shipping – and satisfied customers.

Discover How Easily You Can Boost Your Warehouse Processes

Tasklet Mobile WMS can help you reduce errors and improve the speed of your workflows. And the best part? The stunning and intuitive user interface ensures a seamless experience right from day one.

Book a meeting to explore the system's user-friendly nature and understand why over 1,000 companies utilizing MS Dynamics 365 ERP have selected Tasklet Mobile WMS to optimize their warehouses.
